IRD: Multi Axis Candlestick

First of all please let me say thank you for buying a ticket for my upcoming Interactive Remote Demonstration (IRD). In this demo I will show you the steps that I use to make a Multi-Axis candlestick.

This is a great project for those wanting to get into Multi-Axis work and it allows you to hone both your spindle turning and faceplate skills in one project.

I will take you through all aspects of the project from timber selection, marking out the workpiece with multiple centres, work holding and of course working safely with off centre stock.

So I hope you enjoy the demonstration and go into the workshop and make your own Multi-Axis Candlesticks. If you do then please don't

forget to send me over some photos of your completed projects as I'd love to see them!

Access information for the demonstration will be sent out to you by your club officials.

If you don't make the start of the demo or need to leave early then you will have access to a recording of the demo afterwards for 14 days.

Please feel free to put questions into the chat box, my co-host will relay those questions to me at appropriate break points. We will try to answer as many questions as possible whilst ensuring that we keep the demonstration moving.

During the demonstration my co-host will be posting links to the tools and other products I use. The chat will be saved at the end of our session and sent to you by email.

Once again I'd like to take this opportunity to thank you for supporting me and what I do.

Without you none of this would be possible.

Lastly and most important of all, keep on making those shavings!!
